& DOORS

# TIMBER SIZE RANGE MANUAL.

**BOTANICA** Timber Series

**WE'VE SIMPLIFIED  
OUR TIMBER RANGE.**

More and more people are choosing timber windows and doors and it's simple to see why. First of all, nothing can match the natural beauty and authentic feel of timber. It's also a brilliant insulator, which helps make homes more comfortable and energy efficient. And now it's even easier for architects,

designers and builders, to specify because we have a unified size range available in Cedar and Meranti. So regardless of which species a client chooses (and even if they change their minds), you'll have standard sizes to work to.

# BOTANICA AWNING WINDOWS

– Timber available: Western Red Cedar and Meranti

– Code Prefix: To order add 'W' for Cedar and 'M' for Meranti to the front of the codes below

– This page details our standard size range, refer to page 42-43 for products maximum size

▲ Available as full width sash

● Available in full height

# BOTANICA DECORATIVE OPTIONS

## Ovolo bars

Incorporate Ovolo bars to achieve an authentic Colonial or Federation style. Panes of glass are painstakingly put in one-by-one, between the Ovolo bars. This effect is subtle detail, but matters to those with an eye for design. The attention to detail is noticeable.

## Powered chain winder

For a clean aesthetic, incorporate the electric winder within your awning window.

## Trend horn

## Lambs tongue horn

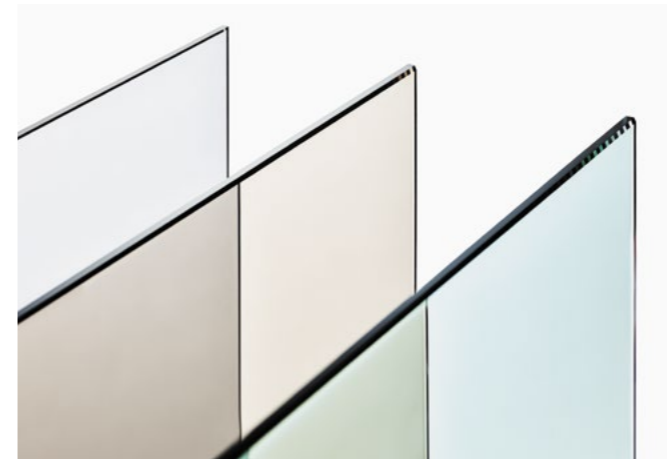

## Bullnose horn

## Splayed horn

# GLAZING OPTIONS

## COMFORT

### Double glazing

Double glazing is the most effective way to improve the energy efficiency of windows and doors, making your living space more comfortable all year round.

### Low E glass

Low E glass has a transparent Low Emissivity coating that reflects heat while still allowing in maximum light, helping keep your home cooler in summer and warmer in winter.

### Toned glass

Toned glass significantly reduces the sun's heat and glare, making it perfect for Australia's extreme summers.

## SERENITY

### Double glazing

Where energy efficiency and acoustics are both required double glazing can be used to reduce noise. The wider the space between the two sheets of glass, the greater the sound improvement.

### Thick glass

Thick glass is often the best choice for reducing low frequency sounds like traffic and neighbourhood noise.

### Laminated glass

Laminated glass dampens more vibrations than single glazed glass.

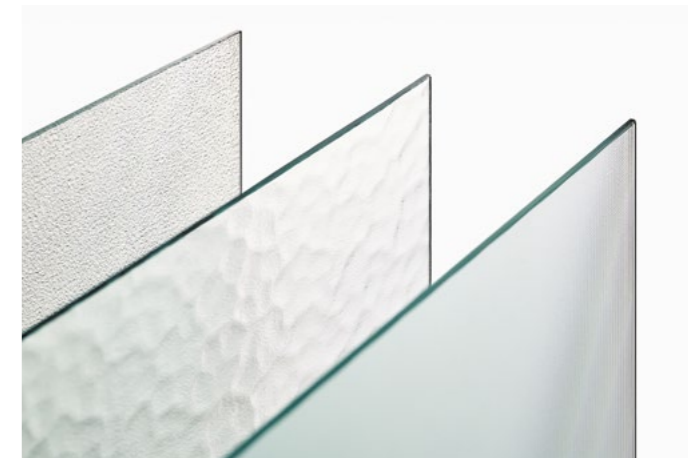

## SECURITY

### Toughened glass

If broken, toughened glass fractures into small particles, significantly reducing the risk of injury.

### Laminated glass

Laminated glass remains intact and resists penetration, when subject to impact.

## PRIVACY

### Textured glass\*

Great for light diffusion, privacy and as a decorative feature.

### Translucent

Laminated crisp white frosted look.

### Acid etched

Acid etch has a translucent satin matte finish.

### Printed glass\*

Any pattern, texture or image can be printed directly onto the glass surface.

\*The availability of textured and printed glass options vary by state.
